

Vaccine Storage Troubleshooting Guide

IF YOU NOTICE A TEMPERATURE EXCURSION:

- 1. Contact the primary or backup vaccine coordinator.
- 2. Document the current, minimum and maximum temperatures, duration of temperature excursion and the time when problem was discovered in the table below.
- 3. Label the vaccine "Do Not Use."
- 4. Store at the appropriate temperature. If your unit is not maintaining the appropriate temperature, transfer the vaccine to other storage units. Do not allow vaccines to remain in a unit while trying to fix it.

Storage unit is too cold <2°C (36°F) for refrigerator

Storage unit is too warm >8°C (46°F) for refrigerator

Factors that may cause temperature excursion (<2°C)

Thermometer placement: Place at the center and check the temperature every 30 minutes.

Control Knob: Adjust to a warmer position, check temperature every 30 minutes.

Vaccine manufacturers and their phone numbers

 Merck & Co. Inc.
 877.829.6372

 GlaxoSmithKline
 877.356.8368

Novartis 800.244.7668

Sanofi Pasteur 800.822.2463

Factors that may cause temperature excursion (>8°C)

Power supply: Insert the plug into the wall socket, turn on the control knob and check if you have power supply.

Door: Close the door properly. Check the door seal and hinges.

Thermometer placement: Place at the center and check the temperature every 30 minutes.

Control knob: Adjust the control knob to a colder position and check temperature every 30 minutes.

Air circulation: Check if your unit has good air circulation. Reorganize your vaccines.

Document the information in the table when temperature excursion occurs

Date	Time	Duration	Staff	Temperature				Problem/Action taken	Result
			Initials	Room	Current	Minimum	Maximum		

- Use a certified and calibrated thermometer with probe in glycol that measures liquid temperature for vaccine storage unit.
- Store water bottles in refrigerator and frozen packs in freezer to minimize the risk of temperature excursion.
